

The background of the slide features a close-up portrait of a woman's face, overlaid with a digital, blue-toned interface. A network of white lines and dots connects various points on her face, suggesting facial recognition technology. A white circle with a crosshair is centered on her right eye, indicating an active scanning or authentication process. The overall color palette is dominated by deep blues and purples, with white text and interface elements.

Iris Authentication is the Flux  
Capacitor of Multifactor  
Authentication

## ABOUT THE IRIS

---

- The iris's unique patterns, which include crypts, ridges, and furrows, are fully developed and fixed before 2 years old
- The unique patterns of the iris do not change significantly after birth, ensuring the reliability of iris recognition systems throughout an individual's life
- These patterns remain stable throughout a person's life, making the iris the most reliable biometric identifier

# END-TO-END SOLUTION

Access control is an essential space and we have created an end-to-end solution that meets the biometric adoption and implementation challenges

**1**

Seamless integration with Lenel / S2 access control technology

**2**

Complete backend platform for simple onboarding

**3**

Comprehensive SaaS model pricing for hardware, software, licenses, warranty, and service

**4**

Integrator network for installations and service

# WHY PRINCETON IDENTITY?

## EXPERTISE

Global leader in biometric identity management providing face and iris solutions with over twenty-five years experience

## PROVEN

Patented biometric solutions deployed in over ninety million Samsung products and enterprise customers in banking, data centers, oil & gas and higher education

## INNOVATIVE

Flexible biometric hub with support for multiple modalities (iris, face, fingerprint, palm vein, and others)

## FLEXIBLE

Open design allows for support of multiple modalities as well as tight integration with various applications
